PROFESSIONAL SUMMARY

Final-year Bachelor of Computer Science (Hons) student at Albukhary International University (CGPA: 3.89) seeking a 6-month Data Science, Machine Learning, or AI internship from March 2027. Experienced in building end-to-end data products spanning computer vision anomaly detection, hybrid RAG question-answering systems, time-series forecasters, and full-stack web applications. Rigorous engineering approach focused on held-out test evaluations, statistical validation, automated tests, and transparent failure analysis.

EDUCATION

Albukhary International University (AIU) — Alor Setar, Kedah, Malaysia

Bachelor of Computer Science (Hons) — Specialisation: Data Science — Expected Graduation: 2027

- **Academic Standing:** CGPA 3.89 | Dean's List Recipient across multiple semesters.
- **Relevant Coursework:** Machine Learning, Data Analytics, Data Structures & Algorithms, Software Engineering, Cloud Computing, IoT, Object-Oriented Computing, Vulnerability Assessment & Penetration Testing.

DATA SCIENCE & SOFTWARE ENGINEERING PROJECTS

BoardSight: PCB Defect Detection (Computer Vision) — github.com/maymyatnoe25/boardsight-pcb-inspection

Python, PyTorch, scikit-learn, Streamlit

- Compared a memory-bank anomaly detector (trained only on defect-free boards) with a fine-tuned ResNet18 on 1,104 VisA circuit-board images containing minute defects (median area of 0.2%).
- Achieved held-out test performance (30 defective, 200 good boards) of AUROC 0.976 (detector) and 0.989 (CNN) with a paired 95% confidence interval of [-0.008, +0.037]. Proven that the CNN required 25–56 labeled defects to match the zero-defect detector.
- Increased detector validation AUROC from 0.91 to 0.99 by scaling image resolution. Generated spatial heatmaps locating 96% of development defects (vs. 27%–43% for Grad-CAM). Built a Streamlit UI flagging uncertain cases for human review.

KerjaRights AI: Question Answering over Malaysia Employment Act 1955 — github.com/maymyatnoe25/malaysia-employment-rag

Python, sentence-transformers, BM25, Ollama (Llama 3.2), Streamlit

- Engineered a hybrid retrieval system (BM25 + sentence embeddings) over all 130 sections of the Employment Act to synthesize source-grounded legal responses via local LLMs.
- Evaluated on 57 hand-labeled questions; achieved Top-3 retrieval accuracy on 14/19 held-out questions (up from 11/19 using keyword search alone).
- Eliminated hallucinated citations (found in 6/26 initial development outputs) by replacing LLM self-citations with programmatic string matching against verified statutory excerpts; correctly rejected all out-of-scope queries.

Malaysia PM2.5 Air Quality Forecaster — github.com/maymyatnoe25/air-quality-forecaster

Python, LightGBM, FastAPI, Streamlit, Docker, GitHub Actions, pytest

- Developed multi-horizon hourly PM2.5 forecasting models (6, 12, 24, 48 hrs ahead) for Kuala Lumpur using LightGBM with 80% prediction intervals and strict chronological split testing.
- Reduced test MAE by 14%–24% over strong baseline models while achieving 0.82–0.92 recall on severe pollution warnings. Enforced data-leakage checks via automated unit tests.
- Containerized and deployed a REST API service using FastAPI alongside a public Streamlit dashboard, integrated with GitHub Actions CI/CD pipelines.

TF CampusCart: Campus Grocery Delivery Web Application Project-Based Learning (PBL)

PHP, MySQL, JavaScript, HTML, CSS, PDO, XAMPP

- Built a full-stack web application serving university hostel students with three distinct role-based portals (Customer, Rider, Admin) secured by PHP session authentication.
- Designed database schemas and implemented backend API routes using PHP PDO with prepared statements and bcrypt password hashing to eliminate SQL injection vulnerabilities.

TECHNICAL SKILLS

Languages:	Python, Java, C, PHP, SQL (MySQL), JavaScript, HTML/CSS
ML & Data:	PyTorch, scikit-learn, LightGBM, pandas, NumPy, Time-Series Forecasting, Leakage Testing, Bootstrap Intervals, Model Evaluation
AI & NLP:	Retrieval-Augmented Generation (RAG), BM25, Sentence Embeddings, Ollama (Local LLMs), Anomaly Detection, CNN Fine-tuning, Grad-CAM
Tools & DevOps:	Git, GitHub Actions, Docker, FastAPI, Streamlit, pytest, VS Code, XAMPP

AWARDS & ACTIVITIES

Academic Honors

- Dean's List Award (Multiple Semesters), AIU
- Certificates available on LinkedIn

Campus Involvement & Languages

- Member, Horizon Club, AIU
- **Languages:** English (Fluent), Burmese (Native)
